Today's Phone Number: \_\_\_\_\_

Thank you for trusting us with the care of your pet. Our goal is to provide the best possible care for both you and your pet. In order to carry this goal, we offer pre-operative blood work, intravenous fluid therapy, CO2 laser usage and post operative pain management. These procedures are standard care in human medicine as well.

### Organ System Profile \$131.12

Pre-Operative blood work screens for pre-existing, underlying, medical problems that could lead to anesthetic difficulties. These difficulties are often unapparent to the owner. These tests can detect anemia, kidney or liver dysfunction and diabetes mellitus. In order to keep anesthetic risks to minimum, we recommend these tests.

I understand the importance of pre-anesthetic screening, please **PERFORM** the above test: \_\_\_\_\_

I understand the importance of pre-anesthetic screening, however I **DECLINE** this procedures: \_\_\_\_\_

### Intravenous Fluid Therapy \$78.73

Intravenous fluid therapy provides numerous benefits to the patient. It prevents dehydration particularly while abdominal or thoracic contents are exposed to room air. It also prevents and helps manage the low blood pressure that anesthetics often causes. Finally, in case of an emergency, there is immediate access to the bloodstream if life-saving medications are needed.

I understand the importance of intravenous fluids, please **PERFORM** this procedure: \_\_\_\_\_

I understand the importance of intravenous fluids, however I **DECLINE** this procedure: \_\_\_\_\_

Every individual responds differently to surgery. Some of our pets experience higher levels of post-operative pain than others. Because of this fact, your pet will receive post-operative pain medication.

I grant permission for Flint Veterinary Clinic to perform this procedure on my pet.
